CORPORATE SOCIAL RESPONSIBILITY

A Better Future Starts Here

At Centerprise, we're passionate about more than just IT disposal. We're committed to creating meaningful change – for our employees, communities, customers, and the planet.

Our People

CiLifecycle are proud to be a Disability Confident Employer. We champion diversity and well-being while ensuring every employee feels valued and supported.

Our Community

We actively support local communities, from Charity Runs, CSR volunteering, donating equipment and Centerprise are proud sponsors of Dragons RFC. Looking after the community is what we do, and we work with customers to support their community and charities of choice.

Our Customers

Your goals are our goals, we provide ESG reporting, reporting, recommendations to improve reuse over recycling outcomes on surplus equipment, and collaborate with customers on local initiatives to deliver meaningful impact within their communities.

Our Planet

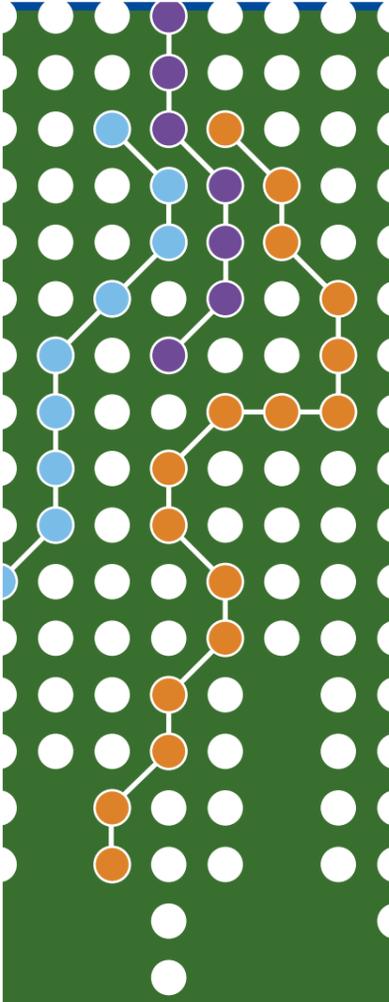

From reducing emissions to promoting IT reuse, we're on a mission to leave the world better than we found it.

Our Customers

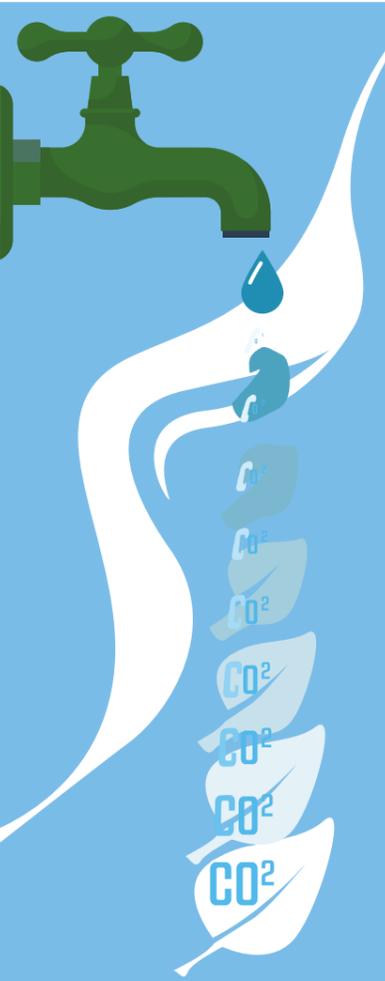

We believe in empowering our customers to achieve their sustainability goals and creating a lasting positive impact together.

At CiLifecycle, we provide comprehensive IT Asset Disposition (ITAD) solutions to support data security, regulatory compliance, and environmental responsibility. Our approach ensures:

Secure Asset Tracking

Minimising the risk of data loss and reputational damage.

Resource Optimisation

Reducing carbon emissions, water usage, and reliance on raw materials.

Cost Efficiency

Maximising financial returns from redundant IT assets while lowering environmental impact.

By prioritising reuse over waste, we help our customers unlock value while protecting the planet and meeting compliance standards.

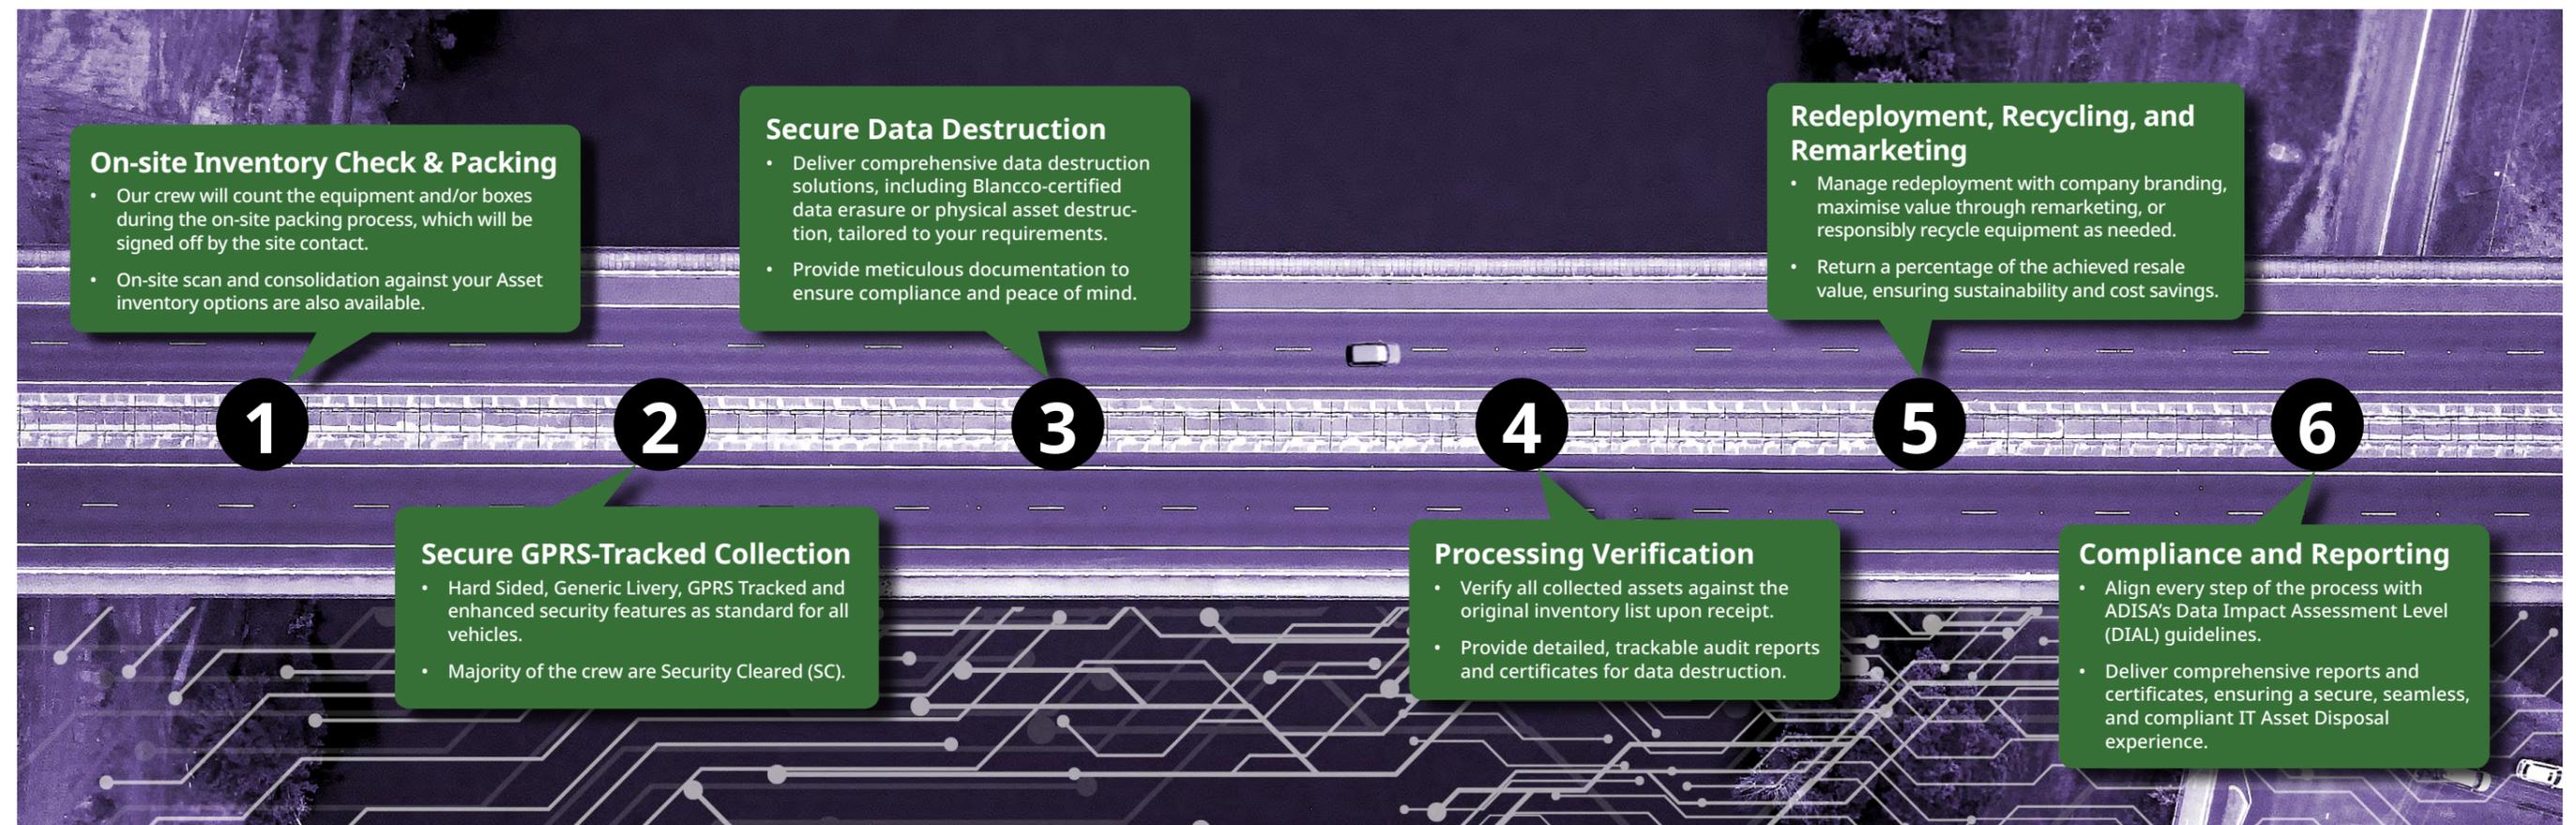

SECURE IT ASSET DISPOSAL

CiLifecycle conducts Secure IT Asset Disposal (ITAD) in full compliance with ADISA's Data Impact Assessment Level (DIAL), ensuring each service aligns precisely with your specific DIAL rating requirements. At CiLifecycle, we provide tailored solutions to meet your unique needs, adhering strictly to your DIAL rating guidelines.

From the initial inventory at the point of collection to secure logistics and processing at our facility, we ensure your hardware is handled with the utmost care. Whether your equipment is re-marketed, redeployed, or responsibly recycled, we guarantee a secure, seamless, and compliant process at every step.

How can we help secure IT Asset Disposal?

- **On-site Inventory Check:** Based on your DIAL rating, we offer tailored inventory services, whether a simple box count, detailed asset count, or on-site scanning of individual items. You can also benefit from our buy-back scheme to generate revenue.
- **Secure Data Destruction:** We provide comprehensive data destruction services, including data erasure with Blancco-certified software or physical destruction of assets, depending on your requirements. All processes are meticulously documented, ensuring compliance and peace of mind.
- **Secure GPRS-Tracked Vehicles:** GPRS-tracked vehicles include features such as stationary alerts, geofencing, and escorted transport for enhanced security. All our staff are security vetted and trained to adhere to current data regulations, ensuring standards are maintained throughout the process. Upon arrival at our facility, assets are counted and verified against the original inventory list, with complete chain-of-custody documentation. You will receive fully trackable audit reports and data destruction certificates.
- **Redeployment, Recycling, Reuse, or Remarketing:** We manage everything, whether redeploying assets back into your business, complete with your company branding, or maximising value through remarketing. A percentage of the achieved resale value is returned to you. At CiLifecycle, we prioritise reusing as much hardware as possible, delivering not only environmental and sustainability benefits but also significant cost savings for your organisation.

DATA ERASURE AND SHREDDING

At CiLifecycle, we ensure total data destruction across all devices and media types in line ADISA Standard 8.0 standards, which is the only accreditation approved by the ICO which ensures your data is processed in line with the UK GDPR legal requirements. As a Blancco Silver ITAD Partner, we use Blancco 3-wipe as standard and provide detailed erasure reports for full traceability and audit compliance. Any device that fails erasure is securely shredded (HDDs to 6mm and SSDs to 3mm).

For shredding, we use our CPNI-approved U45 Ulster Shredder, meeting all off-site destruction requirements. We handle all media types, including:

- ✓ Hard Disk Drives (HDD)
- ✓ Solid State Drives (SSD)
- ✓ Hybrid Drives
- ✓ Media Tapes
- ✓ Removable Storage (USB sticks, SD cards, floppy disks)
- ✓ Embedded Storage (Laptops)
- ✓ Bank Tokens
- ✓ ID Cards
- ✓ Handheld Payment Devices
- ✓ Mobile Phones
- ✓ Optical Media (CDs, DVDs, Blu-ray)

REMARKETING

When IT equipment is no longer suitable for reuse within your organisation, it can still hold residual value in the wider market. At CiLifecycle, our IT remarketing services aim to extend the lifecycle of your IT assets while maximising the financial return for your business.

Leveraging our dedicated remarketing sales channels, we specialise in providing end-of-life solutions for your redundant IT equipment.

How the Process Works:

- 1. Initial Assessment:** It begins with an inventory list detailing your equipment. For transparency, we provide an estimated resale value upfront.
- 2. Secure Processing:** Upon arrival at our facility, all equipment undergoes secure data erasure, functionality testing, and cosmetic grading and assessment.
- 3. Remarketing:** Fit-for-resale equipment is sold through our well-established remarketing channels.
- 4. Comprehensive Reporting:** Detailed reports, including resale outcomes and ESG metrics, are provided.

Benefits to Your Organisation:

- **ESG and Environmental Advantages:** Support sustainability and reduce waste by extending the lifecycle of IT assets.
- **Residual Value Reinvestment:** Use residual value to offset future purchases of products and services.
- **Enhanced Value Opportunities:** Unlock higher residual returns when reinvested in specific products and services.
- **ESG Reporting:** Access detailed reports on carbon offset contributions from reusing products through our processing facility.

With CiLifecycle, you can transform redundant IT equipment into a valuable resource, benefiting your organisation financially while supporting environmental sustainability.

ON-SITE DATA DESTRUCTION

For organisations prioritising data security, on-site data destruction is the most effective way to mitigate risk by ensuring that sensitive information is destroyed before it leaves your premises.

At CiLifecycle, we offer a bespoke service tailored to your specific requirements, including shred size, volume, and more. Our process is fully audited and trackable, providing complete peace of mind.

Using our trusted third-party partners, we securely destroy the following types of equipment and media on-site:

HARD DRIVES

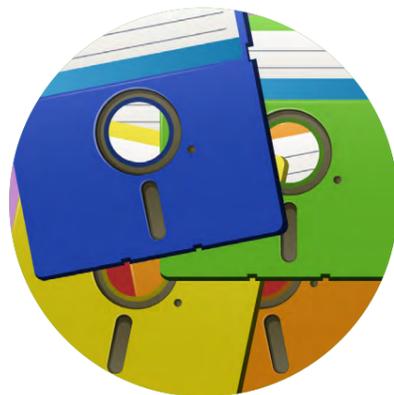

USB STICKS

CDS/DVDS

MOBILE PHONES

MEDIA TAPES

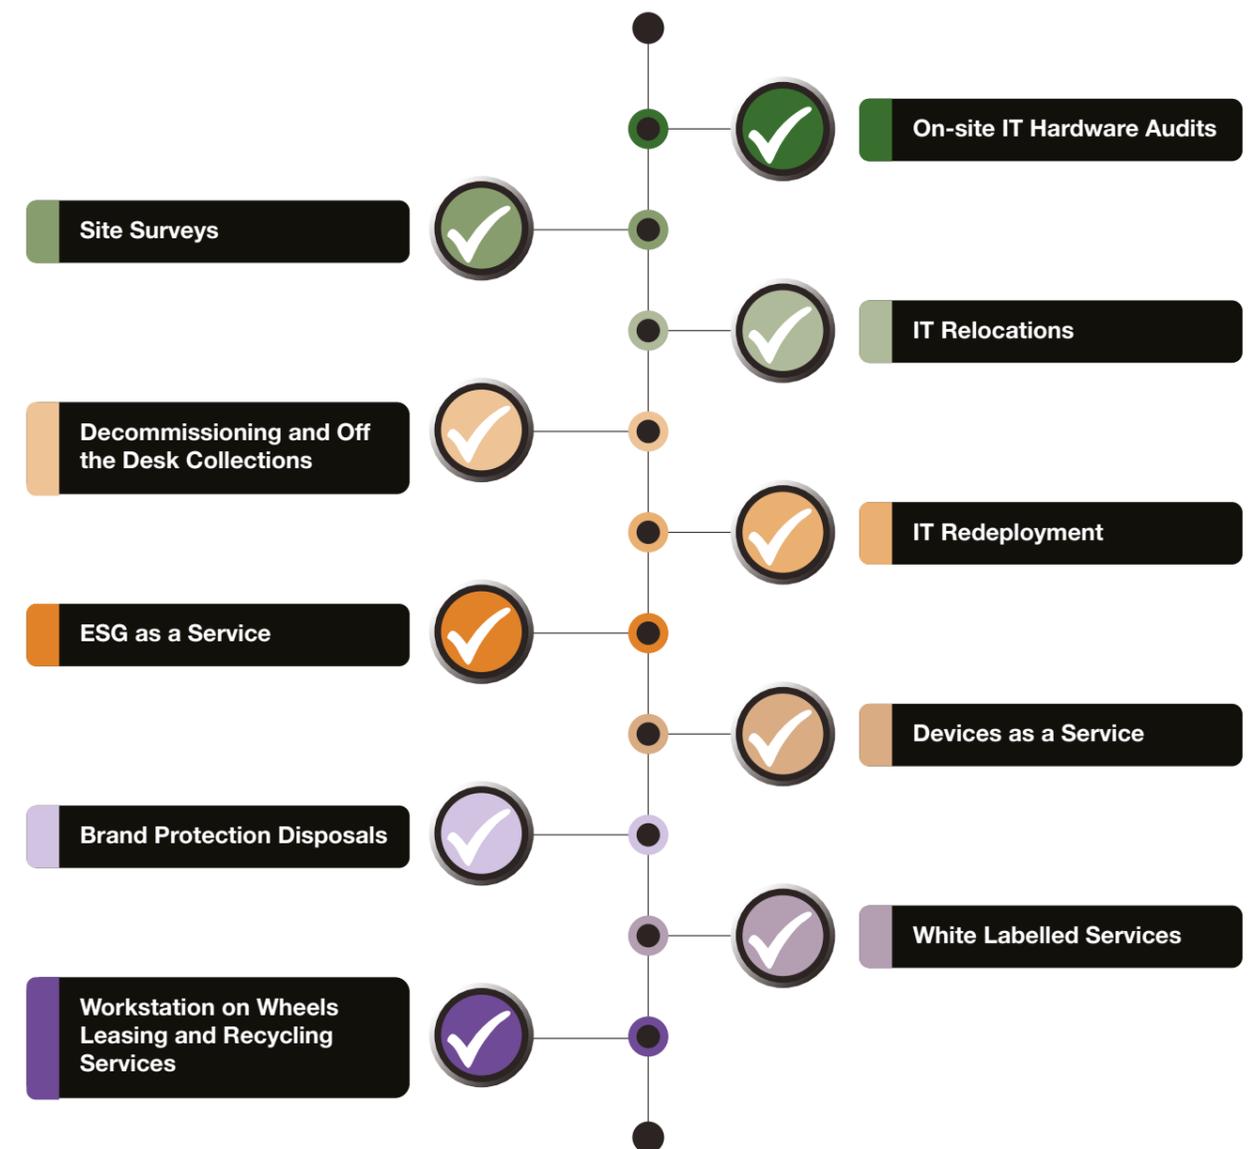

PDAS

Trust CiLifecycle to safeguard your data with a reliable, comprehensive on-site destruction service.

MORE WAYS WE CAN HELP

CiLifecycle is more than an ITAD we offer a range of additional supporting services and products to help reduce stress, reduce costs and minimise your workload.
